

الشركة الوطنية للأسفلت
National Asphalt Company

About us

Pick the best and leave the rest

The National Asphalt Company continues its success by offering an unparalleled level of diversity. Some examples include: road maintenance in a form of asphalt crack sealing, asphalt patching, pothole repair, slurry seals, asphalt paving and chipping. We also manufacture and supply asphalt cold-mix, supply and spray bituminous road binders.

MISSION

We strive to provide a service and product that not only meet, but exceed the expectations of our (clients/customers), using professional manner and transparency in our dealings at all times.

We will endeavor

to constantly develop our techniques and methods in asphalt industry and will always do our best to run the business in a professional and environmentally responsible way.

VISION

We believe that every success is the sum of hard work, determination, and the combination between quality and teamwork. Therefore, in NAC we are dedicated to get the latest innovations with a highly trained team to make the best of it.

Our Products & Services

SLURRY SEAL

Slurry Seal is the most versatile pavement surface treatment systems and highly cost effective. Slurry Seal is also unique in its ability to deposit a durable bituminous mixture in accordance with the demands of a varied textured surface – filling cracks and voids, sealing weather – tight and providing color and texture delineation in a single pass. The use of slurry seal will significantly extend the life of existing pavements by protecting the under-surface from damage caused by water.

ASPHALT PATCHING

Potholes have always been a problem on roads, primarily caused by water and traffic loading. A lack of periodic and/or preventative maintenance of roads often leads to the development of surface cracks, which allow rapid ingress of water into the structural layers during raining seasons. The main objective in reducing pothole formation is thus to ensure that preventative maintenance is applied timeously and to the appropriate standard.

ASPHALT PAVING

There are many reasons that highway engineers and motorists prefer asphalt. Simply stated, asphalt pavements are designed and built to last. Most roads are constructed in layers, with each layer playing its part in delivering the best infrastructure possible. When it's all put together, asphalt pavements can handle the toughest traffic punishment

CHIP & SPRAY SEALS

It is a cost effective pavement maintenance practice that extends pavement life and provides a good driving surface and skid resistance. A Chip & Spray Seal surface consists of an application of bitumen and a layer of aggregate "chips". Chip & Spray Seals are typically used on rural roads carrying lower traffic volumes, and prevent deterioration of the asphalt surface from the effects of aging and oxidation due to water and sun.

In addition to

- Asphalt Rejuvenator
- Courts Refurbishments
- Chipping
- Asphalt Surfacing

Our

BATCH ASPHALT MIXING PLANT

- **Dryer Drum**
- **Burner**
- **Mixer**
- **VIBRATING SCREEN**
- **HOT BIN**
- **MIXED MATERIAL STORAGE**
- **BITUMEN HEATING AND STORAGE UNIT**
- **CONTROL ROOM –OUT SIDE**
- **CONTROL MONITOR**

The image features decorative green line art in the corners. In the top right, there are several parallel lines radiating from a point, and a circular shape composed of many closely spaced lines. In the bottom left, there is a similar circular shape and several parallel lines radiating from a point.
